## LEGIONELLA TESTING SERVICES:

Legionella pneumophila and related bacteria can be found naturally in environmental water sources such as rivers, lakes and reservoirs, usually in low numbers. As they are commonly found in environmental sources they may also be found in the following purpose built water systems such as:

- Cooling towers
- Whirlpool spas
- Water fountains
- Swimming pool
- Drinking water

If conditions are favorable, the bacterium may grow creating conditions in which the risk from Legionnaires' disease is increased. It is therefore important to control the risks by introducing measures to ensure that water systems are kept free from Legionella bacteria.

Legionnaire's disease can result in severe bronchopneumonia with a mortality rate of over 15%. Therefore, it is important that water samples are tested regularly to ensure that water systems are kept free from Legionella bacteria.

## Who is TÜV SÜD?

Established in Germany 140 years ago, TÜV SÜD is one of the world's leading technical services companies offering consultancy, inspections, tests, expert opinions, certification and training.

Approximately 14,000 employees at over 600 locations worldwide provide technology, system and know-how optimization.

## 军团菌检测宣传页:

大自然界的很多水源中如河水，湖水及水库的水都能发现军团菌的存在，正常情况他们都在一个很低的水平。因为环境中军团菌到处都有，所以它可能会污染到我们的这些水源:

- 冷却塔
- 美容蒸汽机
- 喷泉
- 饮用水

适宜的条件下，军团菌就能在这些水源中大量繁殖，而导致军团菌病的爆发。军团菌病是由嗜肺性军团杆菌引起的通过空气传播的以肺炎为主要症状的急性感染性疾病，未及时治疗的话，死亡率达到 15%。春夏季节是军团菌病的高发季节，加强军团菌的控制与检测是十分必要的。

## 关于 TÜV 南德意志集团?

140 年以前在德国成立，致力于咨询，检验，测试，认证和培训。已成为世界领先的技术服务公司之一。

全球大约 14,000 名员工在世界上超过 600 个地点提供技术，体系和专业技能优化服务。
